U.S. Pat. App. Ser. No. 10/523,346 Attorney Docket No. 10191/4088

Reply to Final Office Action of September 24, 2007

## LISTING OF THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of the Claims:

1-7. (Canceled).

8. (Previously Presented) A method for signaling information relevant for an operation of a motor vehicle, comprising:

forming the information by an operating point of a drive unit of the motor vehicle; forming a haptic signal at a control element of the motor vehicle as a function of the operating point, wherein an optimum operating point of the drive unit is indicated by the haptic signal; and

determining the optimum operating point as a function of an output variable to be output by the drive unit and as a function of an instantaneous operating variable of the drive unit.

- 9. (Previously Presented) The method as recited in Claim 8, wherein the control element includes an accelerator pedal.
- 10. (Previously Presented) The method as recited in Claim 8, wherein the optimum operating point includes an optimum engine efficiency.
- 11. (Previously Presented) The method as recited in Claim 8, wherein the output variable includes a setpoint torque.
- 12. (Previously Presented) The method as recited in Claim 8, wherein the instantaneous operating variable includes an engine speed.
- 13. (Previously Presented) The method as recited in Claim 8, further comprising:

  determining the output variable as a function of a position of the control element.
- 14. (Previously Presented) The method as recited in Claim 8, wherein a haptic signaling starts approximately when the optimum operating point is reached.

U.S. Pat. App. Ser. No. 10/523,346 Attorney Docket No. 10191/4088 Reply to Final Office Action of September 24, 2007

- 15. (Previously Presented) The method as recited in Claim 8, further comprising: forming the haptic signal by a restoring force acting on the control element.
- 16. (Previously Presented) A device for signaling information relevant for an operation of a motor vehicle, comprising:

an arrangement for forming the information by an operating point of a drive unit of the motor vehicle;

an arrangement for forming a haptic signal at a control element of the motor vehicle as a function of the operating point, wherein an optimum operating point of the drive unit is indicated by the haptic signal; and

an arrangement for determining the optimum operating point as a function of an output variable to be output by the drive unit and as a function of an instantaneous operating variable of the drive unit.
